Power & Energy Panel Meters Datasheet

ACCUENERGY

DESCRIPTION

The EV300 Series power and energy panel meter is an affordable, user-friendly three-phase metering solution for monitoring power, voltage, current, and bi-directional energy. Certified to utility revenue grade accuracy standards, its standard panel mount design, Modbus-RTU communications, and array of I/O and alarm options make this economical meter a valuable tool in any industrial or commercial environment.

FEATURES

- + Utility Revenue Grade: ANSI C12.20 0.5 Class & IEC 62053-22 0.5s Class
- + Communicate via Modbus-RTU through the built-in RS485 port
- + Pulse, analogue transducer, & alarm-triggered output options available
- + Field-configurable 5A or 1A CT input
- + Two form factors: Standard panel mount meter or built into an AcuPanel pre-wired enclosure

KEY FEATURES

Revenue Grade Certification

- + Ideal for applications that require exceptional accuracy, the EV300 meets utility revenue grade accuracy standards across 50Hz and 60Hz systems. Certified for ANSI C12.20 Class 0.5 and IEC 62053-22 Class 0.5s, it takes true RMS measurements to deliver superior results.

Bi-Directional Energy Metering

- + Critical in renewable energy applications, such as solar or wind, the EV300 can measure the flow of energy in two directions in order to capture both consumption and generation.

Multiple I/O Options

- + With a variety of I/O combinations to choose from, the EV300 can be configured to monitor switches, deliver energy information to a data acquisition server, interface with a PLC, or trigger critical alarms.
- + Digital Input: Monitor switch status
- + Digital Output: Sent energy data to a data acquisition server
- + Analogue Output: 4-20mA transducer type output
- + Relay Output: Over/under limit triggered tripping relay to control load on/off

Standard Modbus-RTU Communications

- + The EV300 includes a built-in RS485 port for communicating over Modbus-RTU in industrial environments. Daisy-chain multiple meters together for efficient data collection.

Built-In Power Supply

- + 24Vdc provides direct power supply to digital input. Reduce the cost, complication, and space of installing an additional low voltage power supply in the panel.

Voltage

- + Supports any voltage system with a rating between 10V to 230V/400V and can be used with or without a potential transformer.

Current

- + The field-configurable 5A and 1A CT input will suit any industrial current transformer.

Frequency

- + Worldwide compliance: The automatic frequency detection feature adapts to 50Hz or 60Hz systems without sacrificing accuracy.

APPLICATIONS

- + Building Automation and Control Systems
- + Energy Management Systems
- + Industrial Facility Metering
- + Commercial Buildings
- + Tenant Submetering
