General Features

The BX-35-ACA, a cost-effective, AC current measuring meter with a very low burden of 0.5VA respectively. Its internal shunt provides for direct connection to 5A CT's (current transformers). No matter what the CT ratio, the 15 turn, infinitely adjustable Span potentiometer enables the user to easily scale the output to display almost any current value required up to 1999A.

The BX-35-ACA meter can withstand momentary over loads of up to 200 Amps (40 times input signal) for one second without developing an open circuit. Our unique differential AC measurement circuit provides high impedance to ground on both sides of the shunt.

Connector Pinouts

This meter uses plug-in type screw terminal connectors for all connections.

Pin Descriptions

Pins 1 & 2 - Input

Pin 9 - Hold: If this pin is left unconnected the meter will operate in a free running mode. When this pin is connected to the Common Pin 11, the meter display will be latched. A/D conversions will continue, but the display will not be updated until Pin 9 is disconnected from Pin 11.

Pin 10 - Display Test: When this pin is connected to the Common Pin 11, all segments of the display light up and 1888 is displayed. This is used to detect any missing segments in the display.

Pin 11 - Common: To Hold, Test or Dim the display, the respective pins have to be connected to this Common Pin.

Pin 12 - Dim/Blank: When this pin is connected to the Common Pin 11 the display is blanked out. If it is connected through an external 1K Ω pot, the display may be dimmed.

Pin 14 & 15 - AC/DC Power Input: These pins are the power pins of the meter and they only accept a special polarized screw terminal plug that can not be inserted into any other input socket. The standard meter has a auto sensing AC/DC power supply that operates from 85-265 VAC/95-300 VDC (PS1 Std). An optional isolated low voltage power supply that operates from 15-48 VAC/10-72 VDC (PS2) is also available.

Connectors

This meter uses plug-in type screw terminal connectors for all input and output connections. The power supply connections (pins 14 and 15) have a unique plug and socket outline to prevent cross connection. The main board uses standard right-angled connectors.

WARNING: AC and DC input signals and power supply voltages can be hazardous. Do Not connect live wires to screw terminal plugs, and do not insert, remove or handle screw terminal plugs with live wires connected.

Calibration Procedure

1. Apply an input of 0 amps AC to the meter by shorting the inputs.
2. Adjust the Zero Offset Pot until the meter reads 000.
3. Connect the secondary of the current transformer (CT) to the meter inputs, and apply a known current. For high current CTs, a known AC current, proportionate to the CT output, should be used for calibration.
4. Adjust the Span Pot until the meter displays the required reading for the current being applied.
5. The DX-35-ACA is now calibrated and ready for use.
(Whenever a new range is selected, re-calibration is required to meet the specified accuracy).

Component Layout

SPAN Adjust Header position	1	2	3	4	5	LO RANGE(0-1000)					HI RANGE(1000-1999)				
SPAN Pot %	10%	10%	10%	10%	10%	10%	10%	10%	10%	10%	10%	10%	10%	10%	10%
Signal Span %	10%	20%	30%	40%	50%	60%	70%	80%	90%	100%					

Signal Conditioning Components

SPAN Potentiometer (Pot)

The 15 turn SPAN pot is always on the right side (as viewed from the back of the meter). Typical adjustment is 100% of the input signal range.

ZERO Potentiometer (Pot)

The ZERO pot is always to the left of the SPAN pot (as viewed from the back of the meter). Typically it enables the display reading to be offset ± 50 counts.

Opening Back Panel

To open back panel, insert a flat screwdriver or similar instrument in both slots on the top of the case and pry open. The BX-Series meters slide out from the rear of the case as a complete assembly.
